

AgileWorks Integration

AgileWorks is a workflow and business process management system widely adopted by Japanese enterprises. However, Saviynt does not currently provide a ready-made Saviynt Exchange connector or out-of-the-box integration package for it.

This lack of a prebuilt integration poses challenges for organizations looking to onboard AgileWorks into Saviynt for identity lifecycle management, access governance, and automated provisioning workflows. As a result, a custom approach is required to establish connectivity, authentication, and data synchronization between Saviynt and AgileWorks.

Customer Value

With this solution, customers gain the ability to seamlessly integrate Saviynt with AgileWorks, enabling unified identity governance across their existing workflow ecosystem. This integration eliminates manual processes, reduces operational overhead, and ensures that access requests, approvals, and account lifecycle events within AgileWorks are fully governed through Saviynt.

By bridging the gap between the two platforms, customers can achieve improved compliance, enhanced security, and greater automation - ultimately increasing efficiency and strengthening their overall IAM posture.

Solution Benefits

Customers can seamlessly integrate Saviynt with AgileWorks using the connection template developed by Macnica. This integration delivers multiple governance, security, and operational advantages:

Centralized Control of Identity Data

The integration consolidates account and entitlement information imported from AgileWorks into Saviynt, creating a unified source of truth for identity governance. This centralization improves oversight and simplifies data management across systems.

Automated Provisioning Across Systems

By integrating with AgileWorks, Saviynt can automatically create, update, and deprovision user accounts. This reduces manual workload, minimizes operational errors, and enhances overall efficiency.

Values

- Seamless integration between Saviynt and AgileWorks using a ready template
- Automated import of AgileWorks accounts, roles, and entitlements
- Unified governance for AgileWorks workflow-based access decisions
- Real-time synchronization reduces mismatches between AgileWorks and Saviynt
- Enhanced auditability with full traceability of AgileWorks access changes

Benefits

Simplified Integration:

- Ready-to-use connection template
- No need for custom connector development
- Faster onboarding of AgileWorks into Saviynt

Improved Governance:

- Centralized identity and access data
- Automated provisioning and deprovisioning
- Better visibility into access and workflow actions

Improved Accuracy of Access Rights

With access rights imported from AgileWorks, Saviynt can validate entitlements and enforce least-privilege principles. This ensures users receive only the permissions necessary for their roles, strengthening security posture.

Enhanced Compliance and Audit Readiness

All provisioning actions and access imports are tracked within Saviynt, enabling complete traceability of identity lifecycle events. This significantly simplifies audit preparation and supports ongoing compliance requirements.

Faster Detection of Inconsistencies

The integration allows Saviynt to quickly identify mismatches between AgileWorks access requests and actual entitlements. This helps prevent unauthorized access, privilege accumulation, and other identity-related risks.

Benefits

Enhanced Security & Compliance:

- Accurate enforcement of least-privilege access
- Full audit trail for all identity activities
- Quick detection of access mismatches and anomalies
