

Saviynt Integrations Training

Training Datasheet

Authored by: Saviynt University

Learning Path Overview

Saviynt Integrations are designed to extend identity governance beyond traditional boundaries by integrating Saviynt Identity Cloud with leading enterprise and cloud security platforms.

The **Saviynt for Wiz** Integration Training specifically focuses on bridging identity and cloud security by combining Saviynt's identity context with Wiz's cloud-native risk intelligence. This learning path provides a comprehensive understanding of how identity-driven insights can enhance cloud visibility, strengthen governance, and enable more effective risk prioritization across multi-cloud environments.

By the end of this learning path, learners will be equipped to implement and manage the Saviynt + Wiz integration, enabling a unified approach to identity governance and cloud security that drives stronger security posture and improved operational efficiency.

Learning Path Duration

- 30 Minutes of learning content
- 40% lecture, 60% demo

Target Audience

- IAM Consultants
- Cloud Security Engineers
- Solution Engineers
- Saviynt Administrators
- Security Professionals

Delivery Methods

- Self-Paced

Prerequisites

- No Prerequisites

Learning Path Objectives

This learning path enables you to achieve the following objectives:

- **Explain the value of Saviynt + Wiz integration** by understanding how identity governance enhances cloud security visibility and risk management outcomes
- **Understand integration architecture and data flow**, including key components, data exchange mechanisms, and how identity and risk data are correlated across platforms
- **Configure integration prerequisites and settings** in both Saviynt and Wiz to prepare the environment for a successful deployment
- **Establish and validate secure connectivity between Saviynt and Wiz** using APIs and authentication mechanisms, along with troubleshooting common issues
- **Leverage account discovery capabilities** to identify unmanaged, orphaned, or high-risk accounts and improve visibility across cloud environments
- **Enrich cloud security findings with identity context** by mapping users, roles, and access to cloud resources for better governance insights
- **Prioritize risks effectively using identity-driven insights**, enabling more informed decision-making and targeted remediation of critical security risks

Course and Modules

01 | Saviynt for Wiz

Saviynt + Wiz – Integration Overview

- Overview of integration, use cases, and value

Saviynt + Wiz – Architecture and Data Flow

- Architecture, components, and data exchange

Saviynt + Wiz – Configuration Setup for Integration

- Prerequisites and configuration steps

Saviynt + Wiz – Establish Connection for Integration

- API setup, authentication, validation

Saviynt + Wiz – Bridge Visibility Gaps with Account Discovery

- Account discovery and visibility improvements

Saviynt + Wiz – Identity Context Enrichment to Prioritize Risks

- Identity enrichment and risk prioritization

Upon Training Completion

Saviynt will provide you with a training completion certificate after completion of this training. A sample of the certificate is shown below:
