

SOLUTION GUIDE

Saviynt Integration and Onboarding Agent

Transform Disconnected Applications into Connected

Many enterprise applications are onboarded to identity governance platforms as disconnected applications, using manual processes to manage access, creating security gaps, compliance risks, and operational inefficiencies. Saviynt's Integration and Onboarding Agent is a computer-using agent (CUA) that leverages agentic AI and natural language processing to bring any web-accessible application under governance control.

The agent sees, understands, and interacts with applications the same way a human administrator does. This human-like interaction means it adapts to interfaces change, understands context across workflows, and reduces integration timelines from weeks to hours.

Revolutionary Application Integration Through Agentic AI

Intelligent, natural language interactions

Saviynt's agent uses advanced agentic AI technology to expedite onboarding and management through natural language commands, navigating interfaces and executing tasks with human-like understanding. The agent comprehends context, adapts to application variations, and makes informed decisions about task execution.

By analyzing application interfaces and understanding workflows, the integration agent governs any web-accessible application regardless of technical limitations or API availability. This breakthrough capability makes legacy systems, homegrown tools, and applications without clean integration paths fully governable within your identity security framework.

Rapid Deployment and Immediate Value

Bring applications under governance control in hours rather than weeks or months. The agent eliminates

the need for custom development, extensive testing cycles, and ongoing maintenance traditionally required for disconnected application integration. IT teams can rapidly expand governance coverage across their entire application portfolio without massive integration projects or unsustainable costs.

Complete Visibility Supporting Continuous Compliance

Deliver comprehensive visibility into user access across your entire application landscape. Saviynt captures complete audit trails of all provisioning actions and access changes — providing accurate access data that strengthens compliance posture and audit readiness.

Additionally, access reviews become more effective as actions taken by reviewers can now be updated within applications as the agent performs actions previously needed by certifiers during scheduled provisioning job runs.

Benefit:

- **Accelerate Time-to-Value**
Onboard in hours, not weeks or months
- **Improve Productivity**
Streamline processes and accelerate user access
- **Enhance Security Posture**
Eliminate orphaned accounts and prevent access creep
- **Boost Compliance** Maintain audit trails across all application portfolios

Scalable, Future-Ready Architecture

The agent scales effortlessly as your application portfolio grows and evolves. The AI-driven approach adapts to application interface changes, reducing the maintenance burden that plagues traditional integration methods. Organizations can confidently bring new applications under governance knowing that implementation remains fast and cost-effective.

The solution seamlessly integrates and onboards legacy, custom, and niche applications, alongside modern SaaS solutions, creating a truly unified identity security program where every application operates within your governance framework. This comprehensive coverage helps enable complete identity governance without leaving any application behind.

ABOUT SAVIYNT

Saviynt's AI-powered identity platform manages and governs human and non-human access to all of an organization's applications, data, and business processes. Customers trust Saviynt to safeguard their digital assets, drive operational efficiency, and reduce compliance costs. Built for the AI age, Saviynt is today helping organizations safely accelerate their deployment and usage of AI. Saviynt is recognized as the leader in identity security, with solutions that protect and empower the world's leading brands, Fortune 500 companies and government institutions.
