

Saviynt AI-Powered Migration Workbench

Migrate from legacy IGA to Saviynt in weeks, not months – without losing complex business logic or depending on scarce legacy expertise.

Organizations running legacy IGA platforms, like SailPoint IIQ or Oracle Identity Manager, know they need to modernize, but years of custom-built business logic make migration feel too risky and expensive.

Saviynt Migration Workbench removes that barrier. This AI-powered accelerator automatically discovers and categorizes identities, apps, roles, and policies in your legacy system, then automatically migrates objects with direct parity in Saviynt. For the remaining complex, custom business logic, Migration Workbench works alongside your team to simplify the technical lift. It's included at no additional cost with your Saviynt subscription.

From Legacy Liability to Modern Advantage

Many organizations have run identity governance for a decade or more on legacy on-premises platforms. These systems handle business logic through custom programming, often built years ago by system integrators who are no longer available. Over time, that custom logic becomes a liability – expensive to maintain and understood by a shrinking pool of people. Meanwhile, the legacy platform falls further behind modern alternatives on cost, flexibility, and features.

Replicating years of custom logic manually takes months and carries real risk: downtime, business disruption, and the fear of breaking something

nobody fully understands anymore. So organizations stay put, absorbing rising maintenance costs and mounting technical debt rather than risk a failed migration.

Migration Workbench Changes the Math

Migration Workbench uses API and LLM-driven automation to discover objects across your legacy IGA environment – identities, apps, roles, permissions, workflows, and policies – without requiring insider knowledge of the old system. Roughly 60–70% of objects typically have direct parity with Saviynt object types and can be migrated automatically. For everything else, including customized

- **Automatically discovers identities, apps, roles, and policies**
- **Migrates 60–70% of objects with direct Saviynt parity automatically**
- **Assists specialists with complex, custom business logic migration**
- **Compresses migration timelines from months to weeks**
- **Included at no additional cost with your subscription**

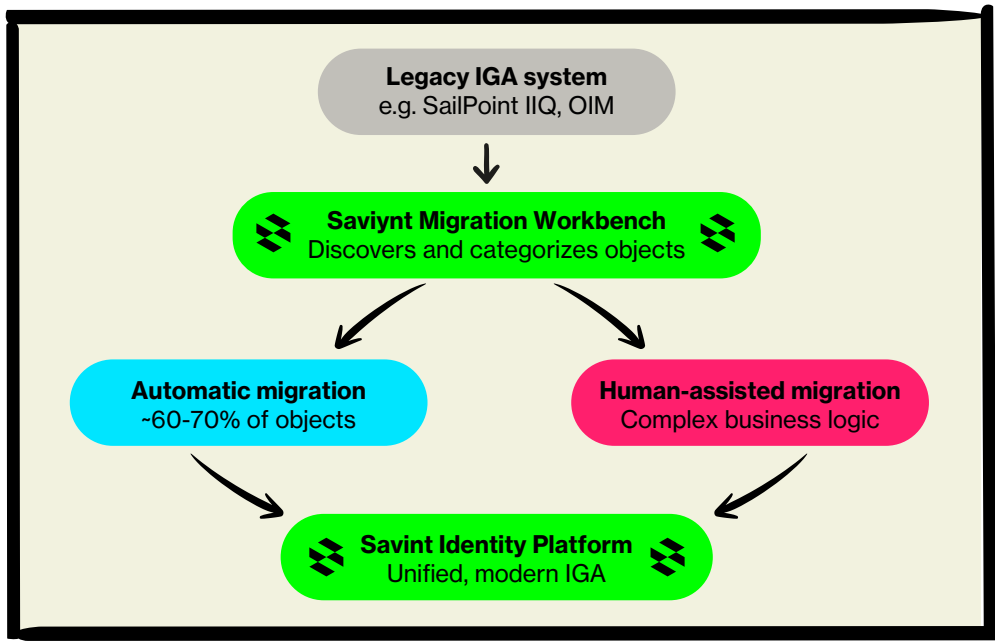

business logic policies, Migration Workbench assists your human specialists rather than leaving them to start from scratch.

The result: a faster, higher-quality migration that compresses timelines from

months to weeks, doesn't depend on people who understand a legacy system built a decade ago, and lets your team spend its time and budget on new value from Saviynt instead of on migration mechanics.

Migration Workbench Capability	Organizational Benefit
Automated discovery of identities, apps, roles, and policies	Eliminates manual inventory work and guesswork at the start of migration
Automatic migration of objects with Saviynt parity (60–70% typical)	Removes the bulk of migration effort without manual rebuilding
AI-assisted migration of custom business logic	Reduces dependence on scarce legacy system expertise
Faster, higher-quality migration process	Shortens migration timelines from months to weeks
Included with Saviynt subscription	No additional cost or separate purchase required

- **AI-powered migration accelerator for legacy IGA systems**
- **No dependence on scarce legacy system expertise**
- **Faster, higher-quality migration than manual methods**
- **Free to all Saviynt customers**

Next Steps
