Saviynt Identity Cloud

Replacing Oracle Identity Management to Modernize your Identity Program

Saviynt

Legacy identity security solutions such as Oracle Identity Management continue to face the same challenges they always have – over complicated and expensive implementations, on-premises deployments and technical debt, heavy and custom coding, and lack of innovation.

Saviynt Identity Cloud, **the industry's #1 converged identity platform,** was born and architected in the cloud to power and protect even the world's largest and most complex organizations. Saviynt delivers the functionality, flexibility and scalability to secure identities in today's fast-paced and ever evolving business environments.

One Solution for Identity Security

Eliminate the challenges around the need for multiple point products to build your identity security program. The Identity Cloud delivers **identity governance (IGA), application governance (app GRC)**, and **privileged access management (PAM)** in a single solution. Gain complete identity lifecycle management and protect internal and external identities in on-premises, multi-cloud, or hybrid environments.

Manage and Govern All Identities, Applications, and Workloads With a 360-degree view of your entire identity landscape, you can manage all identities across your environment whether on-premises, or in multi-cloud, or hybrid architectures. Consolidate application GRC capabilities and gain cross-application separation of duty (SoD) management throughout your enterprise.

Unify administration by bringing together intelligence, reporting, and dashboarding. Understand your identity program's overall health with actionable reporting against key performance indicators including service health, configurations, and compliance. Deliver reports aligned to regulations and frameworks that reduce manual efforts and increase audit success.

Speed Deployment and Simplify Management

Instantly connect cloud platforms, enterprise applications, databases and directories, cloud storage, and more to accelerate implementation timelines with pre-built and out-of-the-box integrations via **Saviynt Exchange.** Our **rapid onboarding** capabilities, combined with hundreds of integrations developed by Saviynt and our partners, let you quickly add applications, significantly reducing the effort required to ingest usage and risk signals from critical enterprise applications.

Bring-Your-Own (BYO) capabilities for existing workflows, security keys, vaults, forms, and more let you leverage previous investments and provide a consistent user experience.

Unify core identity security capabilities

- Internal and external identity governance and administration (IGA)
- Privileged access management (PAM)
- Application access governance

Save costs associated with implementing and managing identity security to lower TCO and increase ROI

Eliminate expensive and time consuming patches, upgrades, and coding

Streamline processes and speed application and identity provisioning and onboarding

Continuously comply with relevant regulations and shorten audit timelines with robust reporting and cross-application SoD governance.

Future proof your security program by eliminating silos with a solution that adapts and grows with you.
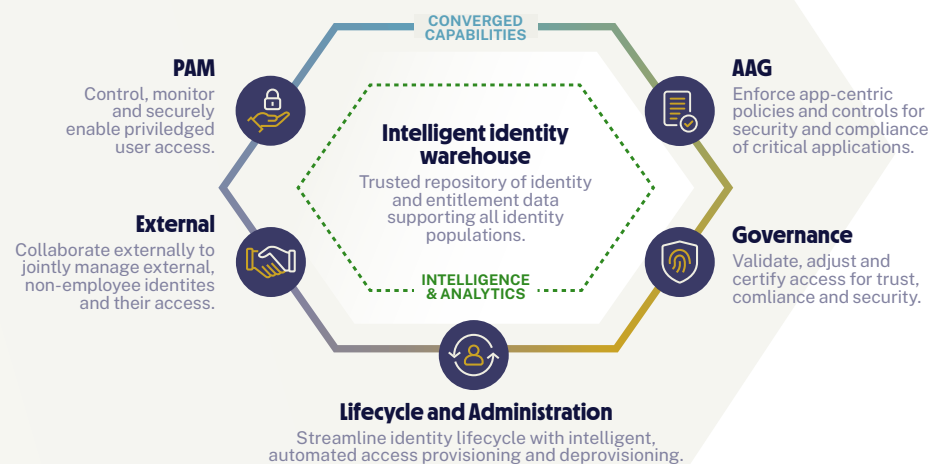

Reduce Costs and Technical Debt

Legacy systems are inherently more expensive to implement, manage and keep up to date. Oracle Identity Manager requires multiple components built over the years by various vendors. This technical debt increases management costs through constant upgrades, patching, and developer costs due to its on-premises architecture and heavy customization needs.

Saviynt vs. Oracle Identity Management

Oracle Identity Management	The Identity Cloud from Saviynt
Requires multiple components to build an inclusive security program	Single, converged platform for IGA, PAM, application access and external identity governance
Time and resource-intensive upgrades, patches, maintenance	Automated updates that don't sacrifice stability
Heavy coding requirements due to customization needs	Configuration-based, low/no code design
Complicated SoD management	Unified cross-application SoD governance
Limited identity visibility and management	360° view of all human and machine identities
Limited number of connectors	300+ pre-built connectors and integrations through Saviynt Exchange

The Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

CONVERGED CAPABILITIES

PAM
Control, monitor and securely enable priviledged user access.

AAG
Enforce app-centric policies and controls for security and compliance of critical applications.

Intelligent identity warehouse
Trusted repository of identity and entitlement data supporting all identity populations.

INTELLIGENCE & ANALYTICS

External
Collaborate externally to jointly manage external, non-employee identites and their access.

Governance
Validate, adjust and certify access for trust, comliance and security.

Lifecycle and Administration
Streamline identity lifecycle with intelligent, automated access provisioning and deprovisioning.

Next Steps
- Learn why organizations choose Saviynt over Oracle.
- Reach out to your Saviynt representative to discuss how Saviynt can quickly modernize and empower your identity security program.

ABOUT SAVIYNT

Saviynt is the leading identity governance platform built for the cloud. It helps enterprise customers accelerate modern cloud initiatives and solve the toughest security and compliance challenges in record time. The Identity Cloud converges IGA, granular application access, cloud security, and privileged access into the industry's only enterprise-grade SaaS solution.
