Infosys

Problem Statement

Many organizations face significant challenges when implementing Identity and Access Management (IAM) solutions due to complex IT environments, legacy systems, rigid change management protocols, and the substantial time and resources required. These obstacles often result in prolonged deployment timelines, inefficient user lifecycle processes, weak governance controls, and difficulty maintaining compliance. Such issues are especially critical for businesses just beginning their IAM journey, transitioning from outdated systems, or managing hybrid IT infrastructures — leaving them exposed to security threats and operational inefficiencies.

The **Infosys Starter Kit for Saviynt Identity Management and Governance Solution** offers a well-structured foundation for organizations aiming to deploy Saviynt's Enterprise Identity Cloud (EIC). This solution is designed to kick-start and accelerate IAM initiatives by providing a robust, scalable framework.

The starter kit helps organizations fast-track their IAM journey by simplifying user lifecycle management, strengthening governance mechanisms, and supporting compliance efforts across the enterprise. Whether you're starting fresh or migrating from a legacy IAM platform, this kit lays the groundwork for a secure, policy-based, and automated identity ecosystem powered by Saviynt.

Who is it for?

- Organizations embarking on their Saviynt implementation seeking a ready-to-use solution with essential integrations
- Enterprises shifting from legacy IAM solutions to a modern Identity Governance and Administration (IGA) platform
- Businesses operating in hybrid IT environments that combine on-premises and cloud infrastructure

Customer Value

This ready-to-use package is designed to accelerate the implementation of identity governance programs using Saviynt Enterprise Identity Cloud (EIC). It delivers core value to organizations by enabling faster time to value, simplifying complex deployments, and ensuring comprehensive identity security.

The foundational kit integrates critical enterprise systems — such as the Source of Truth (HR system), Active Directory (AD), ITSM (Ticketing System), and Office 365 — to establish a centralized, secure, and policy-driven identity lifecycle and access governance framework.

Developed based on industry best practices, standard workflows, and out-of-the-box (OOTB) integrations, this Starter Kit addresses common IAM use cases, allowing organizations to confidently and efficiently deploy essential IAM capabilities.

Business Value:

The Saviynt Implementation Starter Kit enables organizations to:

- Achieve Zero-Day provisioning for seamless onboarding
- Accelerate time to security and regulatory compliance
- Ensure adherence to standardized processes
- Leverage reusable templates to minimize repetitive efforts throughout the user lifecycle
- Stay aligned with Saviynt's native functionalities, avoiding unsupported customizations

Solution Benefits:

- Enhanced User Experience
- Standards & Templates
- Accelerated Onboarding & Offboarding
- Proven framework
- Reusables and Automations

Key Benefits of Adopting the Saviynt Starter Kit:

- **Rapid Deployment:**
  Pre-built planning and integration templates, a rapid onboarding framework, and reusable internal repositories help minimize development effort and accelerate time to value. Organizations experience early wins with immediate automated provisioning, compliance enforcement, and reporting.

- **Out-of-the-Box Connectors:**
  Leverages Saviynt EIC's extensive library of application connectors to enable seamless integration with a wide range of systems — including cloud applications, enterprise platforms, HR systems, and directory services.

- **Regulatory Compliance:**
  Built in alignment with industry standards and compliance frameworks, helping organizations meet regulatory and legal requirements more efficiently.

- **Best Practices-Driven Approach:**
  Incorporates industry-recognized best practices across the software development lifecycle (SDLC), ensuring robust, scalable, and sustainable IAM implementations

Case Study

The client is one of Australia's largest banking and financial services organizations.

Customer had a complex IT environment requiring complete automation of Identity lifecycle processes including customer identities, user access reviews for the bank staff across all the enterprise applications

Infosys helped by providing complete solution architecture, design and build of the IGA solution and CPAM solution using Saviynt platform

Solution Benefits

The Starter Kit is designed to help organizations:

- Accelerate time to market by rapidly deploying core Saviynt components and achieving quick value realization

- Standardize and automate identity lifecycle processes — including Joiner, Mover, and Leaver events — to reduce manual intervention

- Establish access governance and compliance controls from day one (Zero-Day)

- Streamline onboarding of users and applications for secure, efficient access provisioning and management

- Build a scalable foundation for identity operations and risk management, supporting future growth and evolving security requirements

Infosys is recognized for its strong emphasis on process excellence and governance. The Saviynt Starter Kit is built on these same robust principles, offering a structured and end-to-end deployment approach for implementing the solution effectively.

The Starter Kit covers the following key phases:

Foundation Setup

This phase establishes the groundwork for a successful deployment and includes:

- Due diligence workshops, functional and technical requirement sessions, and project kick-off meetings

- Project planning, requirement gathering, and detailed questionnaires

- Recommended architecture tailored for both cloud and hybrid environments

- Environment planning for DEV and PROD tenants

- Pre-deployment checklist and network prerequisites

- Initial tenant configuration, including Single Sign-On (SSO), branding, and SMTP setup

Foundation Applications

This phase provides comprehensive onboarding templates, design documents, test plans, accelerators, and best practices to support commonly used applications and scenarios:

- Integration blueprints for authoritative sources such as HR systems (e.g., Workday, SuccessFactors)

- Configuration of a single Active Directory Domain Controller to manage enterprise domain accounts

- Pre-built workflows for Joiner, Mover, and Leaver (JML) processes

- Automated provisioning and de-provisioning rules and configurations

- Office 365 onboarding as a managed application, enabling license provisioning, mailbox access control, and group assignment

- Integration of Saviynt workflows with IT ticketing systems for streamlined request and approval processes
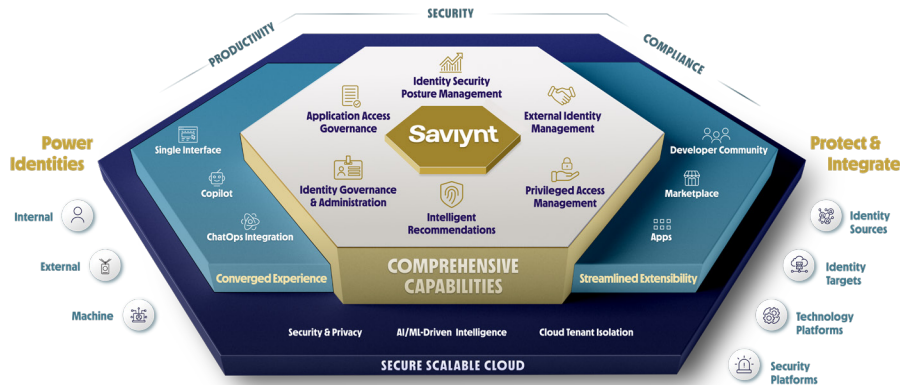

The Identity Cloud

ABOUT PARTNER

Infosys is a global leader in next-generation digital services and consulting. Over 300,000 of our people work to amplify human potential and create the next opportunity for people, businesses and communities. We enable clients in more than 56 countries to navigate their digital transformation. With over four decades of experience in managing the systems and workings of global enterprises, we expertly steer clients, as they navigate their digital transformation powered by cloud and AI. We enable them with an AI-first core, empower the business with agile digital at scale and drive continuous improvement with always-on learning through the transfer of digital skills, expertise, and ideas from our innovation ecosystem. We are deeply committed to being a well-governed, environmentally sustainable organization where diverse talent thrives in an inclusive workplace.
