Saviynt

Solution Guide

Saviynt for CrowdStrike

Detect and stop identity compromises in real time

With 80% of breaches involving both identity and endpoint compromises, siloed endpoint protection and identity security tools create dangerous blind spots that attackers exploit to move laterally through enterprise environments.* And, as AI adoption accelerates, unapproved Shadow AI applications and unsanctioned AI agent identities compound risks, introducing autonomous threats that traditional security tools cannot detect or govern.

Integrating Saviynt with CrowdStrike Falcon's endpoint threat detection capabilities eliminates critical identity security gaps by enabling security teams to proactively identify identity-based threats across AI agent, non-human, and human identities. Leverage real-time threat intelligence from CrowdStrike Falcon to streamline investigations, dramatically improve risk remediation, and enable rapid containment of identity-based threats.

Gain risk visibility across devices, identities and cloud resources
Map compromised endpoints to identity access for a complete view of enterprise risk

- **Real-time risk identification** - Visualize which human, non-human, and AI identities have access to compromised resources
- **Narrow investigation scope** – Identify toxic identity-endpoint combinations to reduce time to containment
- **Comprehensive blast radius analysis** - Understand full incident impact across your enterprise

Discover and govern Shadow AI identities
Prevent autonomous identity threats

- **Detect Shadow AI** - Identify unregistered AI agents, proxies, and autonomous processes running on CrowdStrike managed endpoints
- **Govern AI Agent Lifecycles** - Ensure autonomous agents are properly onboarded and governed
- **Prevent autonomous threat escalation** - Block AI agents from accessing sensitive data or critical systems until they are formally registered, vetted, and approved
- **Condition-based controls** - Ensure access privileges continuously align with current security postures

Streamline risk and threat remediation
Accelerate remediation through intelligent automation

- **Immediate security responses** - Eliminate manual delays in threat containment
- **Entitlement revocation** - Remove dangerous permissions until risks are resolved
- **Approval escalation** - Require additional authorization for requests during active threats

Benefits

For SecOps

- Gain visibility into AI identity-endpoint attack vectors
- Reduce mean time to containment from hours to minutes
- Eliminate manual correlation of endpoint and identity data
- Automate complex remediation workflows

For Identity Teams

- Leverage real-time endpoint threat intelligence for access decisions
- Implement risk-responsive identity governance
- Streamline incident response coordination

For Business Stakeholders

- Reduce overall security risk exposure
- Enhance security ROI with integrated platforms

About Saviynt

Saviynt's AI-powered identity platform manages and governs human and non-human access to all of an organization's applications, data, and business processes. Customers trust Saviynt to safeguard their digital assets, drive operational efficiency, and reduce compliance costs. Built for the AI age, Saviynt is helping organizations safely accelerate their deployment and usage of AI today. Saviynt is recognized as the leader in identity security, with solutions that protect and empower the world's leading brands, Fortune 500 companies, and government institutions.
