The Identity Cloud from Saviynt: Your SAP Identity Management (IDM) Replacement

Saviynt is the leader for modernizing identity security programs

Saviynt

SAP has announced the end of life of Identity Manager. Now is the time to invest in a converged identity platform that addresses security for all identities and applications in your environment – The Identity Cloud from Saviynt.

One Solution for Identity Security

Eliminate the challenges multiple point solutions entail by building your identity security program with the industry's most flexibly and extensible identity security platform. The Identity Cloud from Saviynt delivers identity governance & administration (IGA), application access governance (AAG), external identity management (EIM), intelligence, and privileged access management (PAM) in a single solution. Gain complete identity lifecycle management of all workforce, external, and non-human identities for on-premises, multi-cloud, and hybrid environments.

Protect Your Existing Investments

Legacy identity solutions such as SAP require heavy customization and technical skills. Don't let those go to waste. Saviynt's Bring-Your-Own (BYO) capabilities let you bring existing workflows, keys, vaults, forms, and more with you during migration for enhanced security and a familiar user experience.

Unify Application GRC for All Applications, Not Just SAP

Saviynt unifies application security models (Oracle, SAP, Workday, Epic, Salesforce, etc.) under a single umbrella, aggregating information from any application to standardize control requirements throughout your organization. Simplified program management makes it easier to spot and remediate anomalous access and activity.

The Most Innovative AI/ML in the Industry

Automate intelligently based on access risk, usage patterns and access insights. Reduce hands-on management with highly accurate access recommendations and better manage duplicate identities to support "one identity for life". Saviynt's Intelligence Suite assesses 40+ HR attributes and 14+ internal risk signals so you gain a clearer picture of your risk profile and quickly remove enterprise risk.

Accelerate Onboarding

Instantly connect cloud platforms, enterprise applications, databases and directories, cloud storage, and more to accelerate implementation timelines with pre-built and out-of-the-box integrations via Saviynt Exchange. With hundreds of certified integrations developed by Saviynt and our partners, you can significantly reduce the effort required to onboard and ingest usage and risk signals from critical enterprise applications.

Benefits

- One solution for IGA, PAM, and appGRC
- Governance for workforce, external, and non-human identities
- Cross-app risk management for any application (SAP, Oracle, Microsoft, Salesforce, etc.)
- Continuous compliance, shortened audits
- Reduced costs, accelerated time to value
- Onboard applications once, enable features any time

Industry Leading Identity Security

KuppingerCole Compass Leader
- IGA
- PAM
- SAP Access Control
- Multi-Vendor Access Control

Gartner
- Peer Insights Customers' Choice - '21, '22, '23

Enterprise Management Associates
- Best Privileged Access Governance
- Strong Value PAM Provider

The only FedRamp Moderate Certified Identity Platform

Remove the need for multiple connectors and to de-and re-provision applications when making changes. Simply onboard an application once and turn on capabilities as needed.

Eliminate Standing Privileges with Emergency, Just-in-Time Access

Automated session monitoring lets administrators implement time-bound and customized access that expires when the session is over. Monitoring and reporting is delivered through application logs to support audit trails.

SAP's Path Forward	The Identity Cloud from Saviynt
Requires hybrid and multiple-point products to build an inclusive application governance	Provides a single, cloud-based converged platform for IGA, PAM, application access and external identity governance
Maintains separate security models for different applications	Unifies application security model across all SAP and non-SAP applications
Complicated and single application SoD management	Delivers deep integration with all applications for fine-grained, cross-application visibility and SoD governance
Only supports the SAP ecosystem	Supports all workforce, external and non-human identities for SAP, non-SAP, and hybrid ecosystems

The Identity Cloud combines core identity security capabilities in a single platform that enhances security while reducing costs and management headaches.

The Identity Cloud

Saviynt's Identity Cloud Delivers:

Frictionless Access
- Automated identity lifecycles (joiner, mover, leaver)
- Just-in-time access
- API-based integration

Streamlined Approvals
- Automatic non-critical access approvals
- Risk insights
- In-line collaboration
- Escalation and delegation

Governance & Management
- Complete SoD management
- Ownership and succession
- AD and service account management
- Continuous compliance

Certification & Compliance
- Intelligent certification campaigns
- Application, entitlement owner, service account, and role owner micro-certification
- Business process-based workflows
- Consolidated and actionable reporting
