

Solution Guide

Saviynt FedRAMP Class D (High) Certified Identity Platform

Accelerate your federal zero trust strategy with Saviynt's AI-powered, cloud-native identity security platform for employees, contractors, privileged users, applications, and non-human identities.

Deploy Saviynt's **FedRAMP Class D certified** (formerly called FedRAMP High-authorized) identity security platform to protect your federal ecosystem. Utilize this cloud-native, unified solution to consolidate Identity Governance (IGA), Privileged Access (PAM), and Application Access Governance (AAG), under a single vendor.

Secure all identities – internal or external, human and non-human – with the highest security assurance. Leverage these critical capabilities to accelerate your zero trust strategy and simplify continual compliance.

Consolidate Core Identity Security Functions with One Solution

One Platform. One ATO. The Full Stack.

Saviynt's FedRAMP Class D certification (formerly High authorization) provides the government's most comprehensive identity security platform – encompassing IGA, PAM, and AAG – all under a single authorization boundary, all from a single vendor. Manage human, machine and AI identities with a unified solution that operates without the seams, security gaps, or hidden costs found in patchwork solutions.

The Highest Security Bar, Met FedRAMP Class D maps to the NIST SP 800-53 High baseline, requiring 421 rigorous security controls – significantly more demanding than the Moderate

level. This authorization clears Saviynt to operate in environments where data breaches could have severe, catastrophic consequences. FedRAMP Moderate since 2019, Saviynt has consistently earned deep confidence from federal customers in our engineering, support, and compliance practices. It is owned and operated by a U.S. entity, staffed by U.S. citizens, and housed in restricted data centers within U.S. borders.

Modernize with Zero Trust

In alignment with Executive Order 14028 and OMB M-22-09, FedRAMP Class D provides the foundation for Zero Trust Architecture at federal scale. Agencies can govern access to

- **Least-privilege access governance across enterprise apps, cloud workloads, and privileged systems**
- **Continuous access certification and compliance aligned with NIST SP 800-207**
- **Privileged Access Management with session recording and just-in-time access – all within the FedRAMP Class D boundary**
- **Application Access Governance features including fine grained authorization and powerful SoD enforcement**

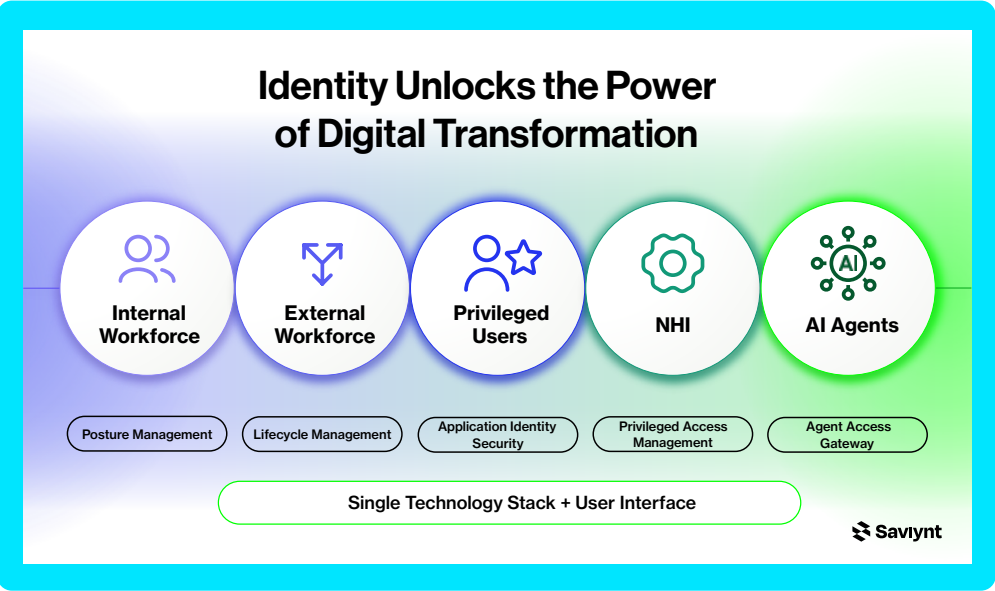

Controlled Unclassified Information (CUI) systems and manage privileged access on sensitive infrastructure using native PAM features like just-in-time (JIT) access and session recording. By **migrating from on-premises legacy IGA to Saviynt's cloud-native platform**, agencies can **reduce technology debt and operational overhead.**

Unmatched Competitive Advantage

Saviynt offers a "best-of-platform" solution where competitors fall short. Saviynt delivers deep, fine-grained application governance and privileged access management natively integrated with state-of-the-art identity governance. One vendor, one contract, and one support relationship simplify both procurement and long-term program management.

Saviynt Identity Platform	Federal Mission Benefit
Unified IGA, PAM, AAG	Eliminates multi-vendor gaps and simplifies security oversight.
AI-Powered Security	Accelerates app onboarding and streamlines governance with intelligent recommendations.
NIST 800-53 High Controls	Meets the most rigorous standards for CUI and sensitive data.
One Codebase	Seamless integration and simplified administration.
Cloud Native	Faster deployment and lower TCO than acquired patchwork tools.

- **Single ATO for a converged platform covering IGA, PAM, and AAG**
- **Previously FedRAMP Moderate authorized (since 2019)**
- **Secure all identities – internal or external, human, machine and AI**
- **Continuous Compliance and audit-ready reporting**
